

ON-THE-JOB TRAINING (OJT)

NARRATIVE REPORT

I. STUDENT INFORMATION

Name:	Allan Gel P Zamora
Course & Year:	BSIT – 4A
OJT Company/Institution:	WAD Electronics
Company Address:	Sitio Lumanlan, Brgy. Manlapig, Capas, Tarlac
Department Assigned:	IT Department
Immediate Supervisor:	Daniel David
Training Period (Start Date – End Date):	December 2 2025 – March 9 2026
Total Number of Hours Completed:	486 hours

II. INTRODUCTION

On-the-Job Training (OJT) is an essential part of the Bachelor of Science in Information Technology (BSIT) program because it allows students to apply the knowledge and skills they have learned in school to a real working environment. It provides students with the opportunity to gain hands-on experience, develop professional skills, and understand how different tasks are performed in the industry. Through OJT, students are exposed to real-world situations that help them become more prepared for their future careers.

I completed my On-the-Job Training at WAD Electronics from December 2, 2025, to March 9, 2026, with a total of 486 training hours. During this period, I was able to observe and participate in various tasks related to computer repair, web development, technical assistance, and operational support. The training allowed me to apply my knowledge in information technology while also learning new skills related to networking, website development, and business operations.

The purpose of this training was to enhance my technical knowledge, improve my problem-solving abilities, and gain practical experience in a professional environment. Through this OJT program, I was able to understand how technology is applied in real business operations and how teamwork and responsibility play an important role in achieving organizational goals.

III. COMPANY PROFILE

WAD Electronics is a growing business founded by Mr. Jhustin Lance Castañeda. The company operates three divisions under its brand, namely WAD Electronics, WAD Print Pro, and WAD Woodworks. And more. During my training, I had the opportunity to assist and contribute to all three of these divisions, which gave me a broader understanding of how the company runs its different lines of business.

WAD Electronics, the core division, focuses on the buying and selling of internet-related equipment such as modems, Optical Line Terminals (OLT), and other networking components. The company provides essential tools commonly needed by internet service providers and technicians in the field.

WAD Print Pro is another division under the company that offers printing services to customers. It caters to various printing needs, whether for personal, business, or promotional purposes, with the goal of delivering reliable and quality printed materials to its clients.

The third division, WAD Woodworks, specializes in the production of doors using CNC machines. This division focuses on designing and manufacturing wooden doors with precision and craftsmanship. The company has plans to expand WAD Woodworks in the future to cover a broader range of wood-related products and services.

Together, these three divisions reflect the company's drive to grow and diversify its offerings while maintaining quality across all its operations.

IV. DUTIES AND RESPONSIBILITIES

During my On-the-Job Training at WAD Electronics, I was assigned various tasks across the company's three divisions. Below are the specific duties and responsibilities I carried out during my training:

Under WAD Electronics:

Computer Repair and Troubleshooting

One of the first tasks assigned to us was to repair and restore the spare computers owned by the company. We were responsible for checking hardware components, diagnosing issues, and ensuring that the units were returned to proper working condition for office use.

WiFi Installation and Networking Assistance

I assisted the employees in the installation of WiFi networks when needed. This task allowed me to apply and develop my knowledge in basic networking setup and connectivity.

Shipping and Logistics Assistance

I assisted in the planning, preparation, and management of shipping items. This included organizing products that were ready for delivery and helping with the proper packing of orders to ensure they were shipped correctly and on time.

Under WAD Woodworks:

Website Development WAD Woodworks Main Website

I participated in the development of the main website for WAD Woodworks, handling the frontend side of the project. This involved designing and building the user interface of the site to visually represent the brand and its products in a clean and presentable manner.

Website Development WAD Catalog

I helped develop the frontend of the WAD Catalog website, a platform designed to display available door products and provide agents with a dedicated view for browsing and referencing product information.

Website Development CNC Cost Calculator

I was part of the team that developed the frontend of the CNC Cost Calculator website, a tool that helps estimate the production cost of doors made using CNC machines. This involved designing an intuitive interface that makes it easy for users to input values and view computed result

Vectric Aspire Operation

As part of supporting the CNC machine operations, I was introduced to Vectric Aspire, a software used for designing and planning CNC-routed Doors. I assisted in learning and navigating the software to support the door production process.

V. SKILLS AND COMPETENCIES DEVELOPED

My On-the-Job Training at WAD Electronics allowed me to develop a range of technical and soft skills that have greatly contributed to my growth as an IT student and as a professional.

Technical Skills:

Computer Hardware and Troubleshooting

Through the computer repair tasks assigned at the beginning of my training, I was able to strengthen my knowledge in diagnosing and fixing hardware issues. This reinforced the technical foundation I built during my studies and gave me hands-on confidence in dealing with real equipment problems.

Frontend Web Development

Participating in the development of three websites for the company significantly improved my frontend web development skills. Building actual websites that serve real business purposes taught me how to create clean, functional, and user-friendly interfaces that meet the needs of a client.

Networking and WiFi Installation

Assisting in the installation of WiFi networks gave me practical exposure to basic networking tasks. This experience helped me better understand how network setup works in an actual business environment.

Vetric Aspire

One of the most unique technical skills I gained during my training was learning how to navigate Vetric Aspire, a software used for designing and planning CNC-routed products. Although it was outside my IT comfort zone, being exposed to this software broadened my technical knowledge and gave me an appreciation for how design software is used in manufacturing.

Business Operations and Process Awareness

Working across three divisions of the company gave me a practical understanding of how a business operates. From web development to shipping coordination and CNC production support, I gained insight into the different processes that keep a business running, which is knowledge that goes beyond what is typically taught in a classroom.

Soft Skills:

Teamwork

Throughout my training, I learned the value of working as part of a team. Even when certain tasks were not directly assigned to me, I was always willing to step in and help my colleagues whenever they needed assistance. This willingness to collaborate made the work environment more productive and enjoyable.

Communication and Adaptability

Working in a multi-division company required me to communicate clearly with different people and adjust to different types of tasks. Whether it was coordinating with employees on shipping, discussing website features, or assisting in CNC operations, I learned to communicate effectively and adapt quickly to whatever the situation demanded.

VI. CHALLENGES ENCOUNTERED

Every training experience comes with its own set of difficulties, and my OJT at WAD Electronics was no exception. One of the biggest challenges I encountered was learning how to use Vectric Aspire, a software used for designing and planning CNC-routed products. As someone from an IT background, working with design and manufacturing software was an entirely new experience. It took time and patience to understand how the tools and features worked, but through continuous practice and guidance from the employees, I was gradually able to navigate the software and use it to support the door production process.

Another challenge I encountered was witnessing the complexity of planning and managing the shipment of items. Although I was not directly responsible for the task, observing the process made me realize how demanding logistics can be in a real business setting. Coordinating deliveries, organizing items, and ensuring everything is handled correctly requires a great deal of effort and attention to detail. It gave me a deeper appreciation for the hard work that goes into keeping the operational side of a business running smoothly.

These challenges taught me the importance of being open to learning things outside of my comfort zone and that difficulties in the workplace are opportunities to grow both professionally and personally.

VII. SIGNIFICANT LEARNING AND EXPERIENCES

My OJT at WAD Electronics was filled with meaningful experiences that went beyond technical knowledge. One of the most significant things I learned was how to work in a real business environment where multiple tasks and responsibilities are handled simultaneously across different divisions. Being exposed to WAD Electronics, WAD Print Pro, and WAD Woodworks gave me a well-rounded perspective on how a multi-division company operates and how each part contributes to the overall success of the business.

The web development projects were among the most rewarding experiences during my training. Being able to build the frontend of actual websites that serve real purposes for the company from the main WAD Woodworks website to the WAD Catalog and the CNC Cost Calculator gave me a sense of accomplishment and showed me how the skills I developed in school can be applied to create something meaningful and functional in the real world.

Assisting in the WiFi installation was also a memorable hands-on experience. During this task, I learned how to crimp and attach RJ45 connectors to Ethernet cables, as well as how the overall process of setting up and installing a network works in an actual setting. It was a practical experience that reinforced my understanding of networking and gave me skills that are directly applicable in the field.

Working alongside the CNC machine operations and being introduced to Vectric Aspire also opened my eyes to how technology extends beyond IT and into manufacturing. It was a perspective I had never considered before, and it made me realize how broad and interconnected different industries can be when technology is involved.

Beyond the technical side, one of the most memorable aspects of my training was the work environment itself. The employees were approachable and always welcoming, and the boss, Mr. Jhustin Lance Castañeda, was kind and forgiving throughout the entire duration of my training. His patience and understanding made it easier to make mistakes and learn from them without fear, which I believe is one of the most important qualities of a good leader. This experience reminded me that a positive and supportive workplace greatly influences how well a person grows and performs.

VIII. CONCLUSION

My On-the-Job Training at WAD Electronics from December 2, 2025, to March 9, 2026, was an enriching and rewarding experience that allowed me to grow both technically and personally. Over the course of 486 training hours, I was able to apply the knowledge I gained from my BSIT program into real and practical tasks, ranging from computer repair and frontend web development to networking assistance, shipping observation, and CNC machine operations support.

The training exposed me to a wide range of responsibilities across three business divisions WAD Electronics, WAD Print Pro, and WAD Woodworks which broadened my understanding of how technology plays a role not only in IT but also in manufacturing and business operations. The challenges I faced, particularly in learning Vectric Aspire and witnessing the complexity of shipping and logistics, pushed me to step outside my comfort zone and develop a more adaptive and open-minded approach to work.

Most importantly, the experience taught me the value of a supportive work environment. The kindness and patience shown by Mr. Jhustin Lance Castañeda and the employees made every task feel manageable and every mistake feel like a lesson rather than a setback. I leave this training more confident, more skilled, and better prepared to face the demands of the IT industry in my future career.

IX. ACKNOWLEDGMENT

I would like to express my sincere gratitude to the WAD, for giving me this opportunity to complete my On-the-Job Training (OJT), where i gained my soft and technical skills in the IT field.

I would like to thank our Dean, Rossano C. Samson, for guidance and support during our training.

I would like also to express my sincere gratitude to the owner of the business, Sir Jhustin Lance Castañeda for welcoming and giving me the opportunity to complete my On-the-Job Training (OJT), which taught me the real world-work experience.

I am thankful to sir, Daniel David for his patient guidance during our training and for being professional in his work, which taught me how to be productive.

I am also thankful to Sir Joshua Dela Cruz Barola for his patient guidance in teaching me how WiFi modems work and how the shipping of items is managed, which greatly expanded my technical skills as an IT intern. Beyond his knowledge, Sir Joshua carried himself with a professional yet approachable personality that made it easy to ask questions and learn comfortably.

Lastly, I am thankful to all my colleagues for patient guidance and sharing their knowledge and technical expertise, which helped me with my career growth.
